INTRODUCTION

Bridging Farmers and Customers

Many local farmers depend on middlemen to sell their produce, which reduces their profits and limits direct connection with buyers. At the same time, customers want fresh, affordable, and locally-sourced products but lack a convenient way to find trusted sellers.

AgroLink is a web-based marketplace that connects farmers directly with customers — supporting local agriculture, improving farmer income, and giving customers a simple way to shop fresh.

No Middlemen

Direct farmer-to-customer sales

Fresh Produce

Sourced from trusted local farmers

Wider Reach

Farmers reach more customers online

Objectives of the Platform

1

Direct Connection

Link farmers and customers without intermediaries, increasing farmer profit margins.

2

Convenient Shopping

Let customers browse, search, and order fresh produce easily online.

3

Farmer Empowerment

Give farmers tools to manage products, orders, and reach a wider audience.

4

Transparency & Trust

Reviews and ratings build trust between customers and local sellers.

SYSTEM FEATURES

Key Functionality

01

User Registration & Login (Farmer / Customer)

02

Farmer Product Management (Add, Edit, Delete)

03

Product Search & Category Filtering

04

Shopping Cart & Checkout

05

Order Placement & Tracking

06

Payment Processing

07

Product Rating & Review System

08

Sales Reports & Admin Tools

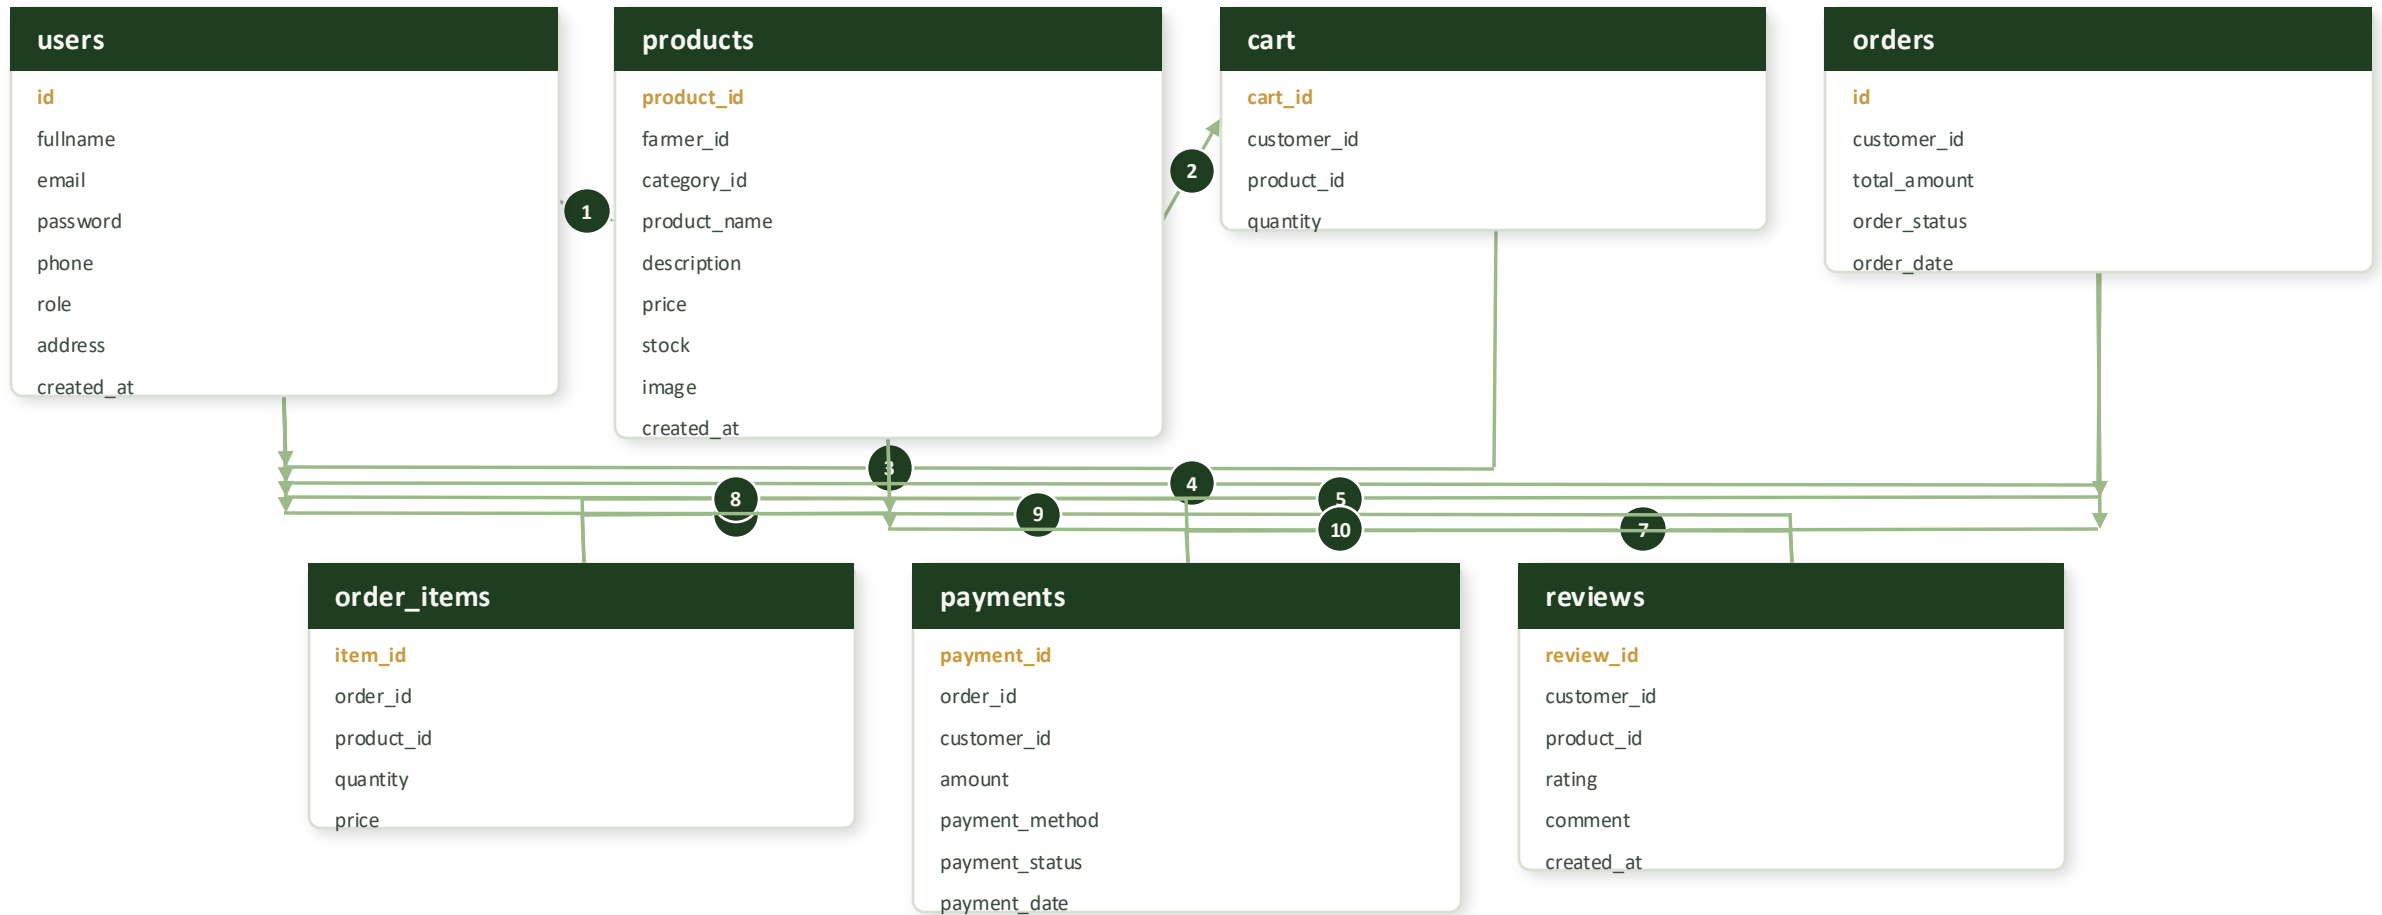

09

Mobile Responsive Interface

DATABASE DESIGN

Entity Relationship Overview

7 core tables, linked by foreign keys shown as numbered arrows below.

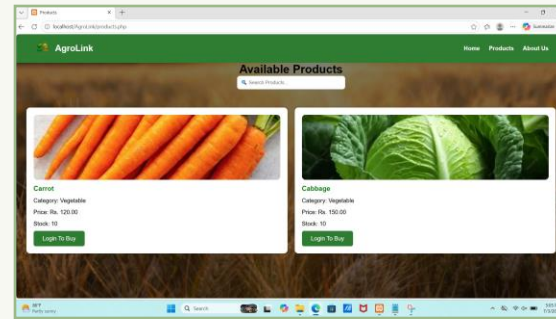

- 1 products.farmer_id → users.id
- 2 cart.product_id → products.product_id
- 3 cart.customer_id → users.id
- 4 orders.customer_id → users.id
- 5 order_items.order_id → orders.id

- 6 order_items.product_id → products.product_id
- 7 payments.order_id → orders.id
- 8 payments.customer_id → users.id
- 9 reviews.customer_id → users.id
- 10 reviews.product_id → products.product_id

Development Milestones

TEAM CONTRIBUTIONS

Technology-Based Contributions

HTML Development

W.I.M. Karunanayaka

PS/2022/129

- Page structures using HTML
- Registration & login forms
- Product display layouts
- Cart, payment & order pages
- Navigation menus & sections

Overall website structure and page creation.

CSS Development

W.V.T. Tharindi

PS/2022/088

- Responsive layouts
- Navigation bar styling
- Forms & tables design
- Product card design
- Hover effects & animations
- UI consistency

Website appearance and user experience.

JavaScript Development

U.A.I. Vinodya

PS/2022/211

- Login form validation
- Registration form validation
- Email validation
- Password validation
- Confirmation popups
- Interactive UI effects

Client-side validation and user interaction.

PHP Backend Development

E.M.M.K. Dissanayake

PS/2022/250

- User authentication
- Session management
- Product management
- Cart functionality
- Order processing
- Payment processing

Server-side business logic.

Database Dev. & Testing

L.K.M.S. Rajapaksha

PS/2022/084

- Database design
- Table creation
- Relationship management
- SQL queries
- Testing & debugging
- Documentation & presentation prep

Data management and quality assurance.

Empowering Farmers, Serving Communities

AgroLink gives local farmers a direct digital channel to customers — cutting out middlemen, increasing income, and making fresh produce easier to find and buy.

- ▶ Live walkthrough of farmer & customer flows
- ▶ Q&A and feedback
- ▶ Future: delivery logistics & analytics dashboard

Thank You
